Appl. No.: 10/693,828

**AMENDMENTS TO THE SPECIFICATION WITH MARKINGS TO SHOW
CHANGES MADE**

Amend the following paragraph(s):

[0025] – As can be seen from Fig FIG. 1, the drive components connected to the carrier 10 form a fully operational unitary structure which may assume a driving function, without provision of a housing. The provision of a housing [[(not shown)]] may, however, be suitable for protection and safety considerations. In this case, the housing is so configured that the carrier 10, at least partially, contacts the inner surfaces of the housing. Moreover, the provision of the housing may afford also advantages as far as a support of the carrier is concerned because the carrier can be supported in suitably designed bearings. The housing may be configured to have housing portions which are screwed together at their corners by suitable screw fasteners, whereby the partition plane of both housing portions extends approximately in an area of the carrier.--.
